Line Chord (3 Wire)

Handset Chord (4)

Cradle Switch

Speech Amplifier IC

Cut OFF Switch

Magneto Generator

AC Buzzer

Trouble Shooting

1. Check Magneto phone Output voltage : 75 to 90 VAC.
2. Make loop between line side and rotate magneto generator, it will be hard, so power supply is extending, if handle is free then no supply is extending to the line.
3. The minimum incoming voltage to buzzer should be 35VAC.
4. Change the magneto phone power supply 3VDC periodically.
